OtoClear® Ear Irrigation Tip

Bionix OtoClear® Ear Irrigation allows healthcare professionals to utilize a soft, flared, 3 streamered tip that eliminates the mess, improves patient safety, and is compatible with a variety of delivery devices to meet the personal preference of every facility.

PROBLEM

Traditional ear irrigation shoots water directly into the ear canal, which can be dangerous and run the risk of causing perforation to the eardrum.

SOLUTION

OtoClear® Ear Irrigation Tips direct water toward the ear canal wall, with three divergent streams, instead of directly at the Tympanic Membrane. The tip is also designed with a soft, flexible material for patient comfort and flared design to prevent back splash and over insertion.

RESULTS

A clean and safe procedure that improves efficiency and patient experience.

“Our office is very happy with the soft (OtoClear) tips. They are easier to maneuver in the ear canal and more comfortable for the patient.” - Laura Griffith, MA

OTOCLEAR TIPS ARE
SINGLE USE ONLY
