EarWay® Pro

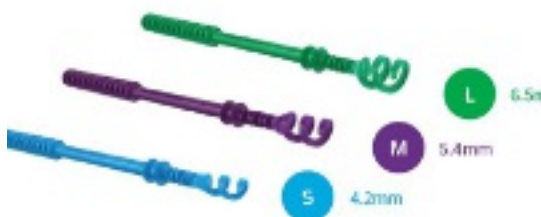

Innovative solution for cerumen management

“EarWay® Pro is quick and easy taking
less than one minute per ear”

“I started working as an Audiologist in 1981 and during my career I have worked in the UK for the NHS, as a Private Dispenser (Fitter) and also for Phonak UK in the Professional Services team providing education and training opportunities for professionals. Clients requiring Ear Wax removal was always problematic until I became qualified and started to provide an Ear Care service approximately 8 years ago. I have been using EarWay® Pro for more than 2 years and I can recommend it as an innovative solution for cerumen management. I found the procedure with EarWay® Pro is quick and easy taking less than one minute per ear. It is also safe with no concerns relating to trauma or noise levels - often a consideration with other procedures. I have also found EarWay® Pro beneficial for clients with learning disabilities or Dementia where other procedures may have been contraindicated due to the clients' behaviour. I have no hesitation in recommending EarWay® Pro as part of your Toolkit.

EarWay Pro is now available in 3 sizes:
